Laboratory, John Innes Centre, Colney Lane, NR4 7UJ Norwich, UK,
E-mail: michael.bevan@bbsrc.ac.uk
Information on performance of analysis and a more detailed
annotation of this entry and other sequences of chromosomes 3, 4
and 5 can be viewed at: http://www.mips.biochem.mpg.de/proj/thal/
this fragment has an overlap with ATCHRIV51 at the 5' end and an
overlap with ATCHRIV53 at the 3' end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="similarity to putative potassium transporter AtKT2p & AtKT1p, Arabidopsis thaliana, Patchx:G2384669 & Patchx:G3384671 contains EST gb:A1997834.1" /codon_start=1

AT denotes an activation tag dissociation transposon within a
single line, ET an enhancer trap dissociation transposon, GT a gene
trap dissociation transposon, MT a mis-expression enhancer trap
dissociation transposon, SM a defective suppressor mutator
transposon. 3 denotes a sequence derived from the 3'end of the
transposon because a sequence derived from the 5'end of the
transposon BESRC GARNEt, ATIS project

the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants war and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 1'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the C-terminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or LART ecotypes and therefore may contain polymorphisms when compared to sequence from Col-0. Genset carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the 5' sequences, selection of clones, and sequence assembly.

* NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to the novel isolated Arabidopsis thaliana endomembrane associated (ENDO) gene promoter sequence. The nucleic acid is useful for directing expression of genes in plants. The present sequence represents the A. thaliana ENDO promoter of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                               99
                                                                                                                                                            New isolated ENDO promoter from the gene of Arabidopsis thaliana, useful for directing expression of genes in plants.
                                                                                                                                                                                           The invention relates to the novel isolated Arabidopsis thaliana endomembrane associated (ENDO) gene promoter sequence. The nucleic acid is useful for directing expression of genes in plants. The present sequence represents the promoter fragment taken from A. thaliana clone RCIS.

                                                                                                                                                                                                                          1986
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting mucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to ablotic stress. The present sequence is that

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG chincleotides within the target nucleic acid. ABZ03861 to ABZ11118 cropresent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for discrentiating between healthy haematopoietic cells and proliferative clusterniang the cytosine methylation state and/or single nucleotide cyclymnems (SNPs) of haematopoietic cell proliferation disorder calated sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between consuction culture method enables a haematopoietic cell proliferation of haematopoietic readment and/or monitoring of haematopoietic cell proliferation disposes and haematopoietic cell proliferation of haematopoietic cell proliferation and of haematopoietic cell proliferation and proliferation of haematopoietic cell proliferation and proliferation of haematopoietic cell proliferative disorder method enables a haematopoietic cell proliferative disorder method enables a

The products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be used for gene therapy. The reagent of the invention and any proteins and antibodies derived from it, are used (i) for analysing tissue and blood samples for medical diagnosis; (ii) for analysing tissue and blood camples for medical diagnosis; (ii) for analysing tissue and blood chronic joint diseases, on the basis of molecular characterisation of determining the etiological pathogenicity principle of as yet uncharacterised inflammatory diseases, also monitoring progression and/or treatment of disease, and optimisation of therapy and (iii) for developing treatments for inflammatory diseases, particularly of joints, infections and tumours. The present invention describes a method for detecting and differentiating between haematopoletic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. As209661 to ABZ1118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present nivention can be used: invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute of disorder haematopoietic cells proliferation disorder determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also an bubblasses. The nucleotide sequences from the present invention can also an halp assess dispersion of the present and/or monitoring of the present and/or monitoring of the present and/or monitoring of the present and/or monitoring the present and/or monitoring or proposed the present and/or monitoring or present and/or monitoring or present and/or monitoring or proposed the present and/or monitoring the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or proposed the present and/or monitoring or pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1644

The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of hemacopoietic call proliferative disorders. The present method enables highly specific classification of haemacopoietic call proliferative disorders allowing for improved and informed treatment of patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09661 to ABZ10118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: disorder haematopoietic cells; for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute
                                                                                                                                                                                                                          Haematopoietic cell proliferation disorder related DNA sequence #386.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lymphocytic leukaemia and acute myelogenous leukaemia, as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 12
```

```
The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute mysloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, nevoscular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute mysloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 361

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer, in particular an oligomerlection or peptide nucleic acid (PNA) -oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleocide polymorphisms (SNP9) in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation states) e.g. adenosine deaminase deficiency, viral infection, retroviral infection, sezary syndrome, haematological disorders, immunological disorders, werner syndrome, tuberculosis, developmental disorders, psoriasis, Rieger's syndrome, neurological disorders, neurodegenerative disorders, Waardenburg syndrome, Niemann-Pick disease, myelddysplatic syndrome, neurological disorders, myelddysplatic syndrome, neurodegenerative disorders, waardenburg syndrome, Niemann-Pick disease, myelddysplatic syndrome, neurological disorders, myelddysplatic syndrome, neurological disorders, myelddysplatic syndrome, neurological disorders, myelddysplatic syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurodegenerative myelders syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurodegenerative myeldysplatic syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological syndrome, neurological synd
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acids or oligomers, useful for diagnosing or treating diseases associated with DNA transcription, e.g. immunological disorders, Werner syndrome, psoriasis, myocardial infarction, solid tumors or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               is identical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     infarction, hypertension, angiogenesis, erythropoiesis, congenital heart disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours or cancer. Sequences ABK28127-ABK28472 represent DNA transcription associated genomic DNA molecules of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from the European Patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         90 AAAATAATTTTTTGTATCCTAAAGTTATAACTTACAATTTTCCACACTTCAGTTTGGTAG

The invention relates to nucleic acid sequences comprising at least 18
bases of a chemically pretreated gene associated with gene regulation,
selected from 94 genes (ABL49391-ABL49394) and/or complementary sequences
associated with DNA replication, CRNPB, DNA2L, ATR, CHDIL, ERCGJ, SNRPAL,
RAD50 and LIG2. The chemical pretreatment converts cytosine bases
commethylated at the 5-position to uracil or another base with
cytosine methylations. The DNA sequences and method are useful in the
cytosine methylations. The DNA sequences and method are useful in the
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation patterns of such genes. They are especially useful
cytosine methylation to the patinted specification and was supposed to
ftp.wipo.int/pub/published.pct sequences. However, the sequence data did
cnot correspond to that referred to in the specification. The present data
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5728

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2 Application US/09806708B

Facent No. 6784342

GENERAL INFORMATION:
FAPLICATION University of British Columbia

TITLE OF INVENTION: Regulation of Embryonic Transcription in Plants

TITLE OF INVENTION: 2001-04-03

CURRENT APPLICATION NUMBER: US 60/147,133

FRIOR FILING DATE: 1999-08-04

NUMBER OF SEQ ID NOS: 23

SOFTWARE: Patentin version 3.0

LENGTH: 1141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CLOO1307
CURRENT APPLICATION NUMBER: US/09/949,016
